

Area Review

Area – the measurement of the space inside a shape

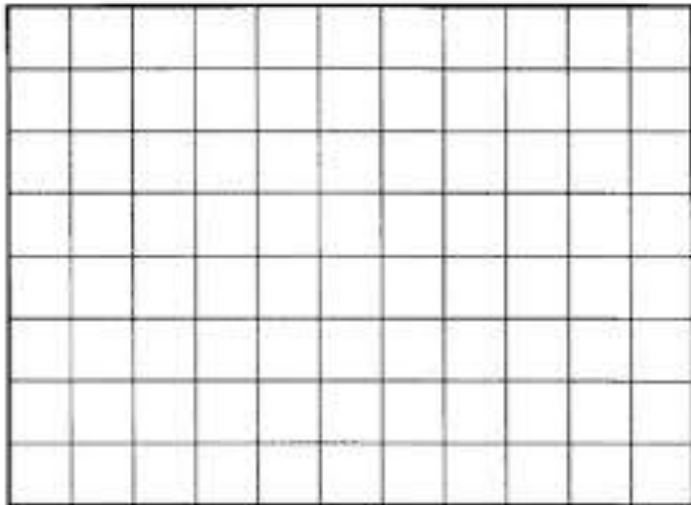

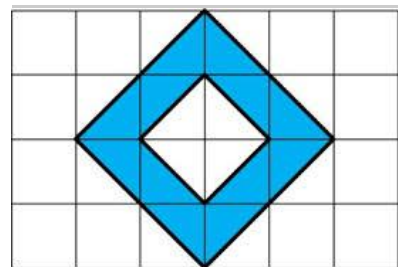

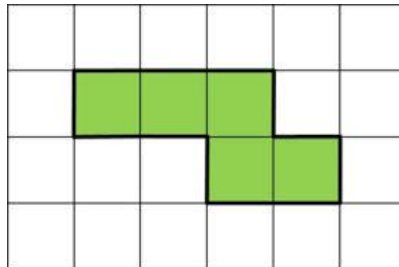

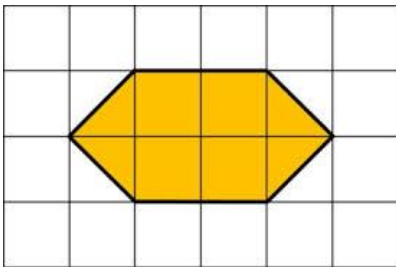

Square Units – the units used to measure and record Area

Students should be able to determine the area of a shape using whole and $\frac{1}{2}$ square units.

They must be able to draw a shape that has a predetermined area.

Students should also be able to compare the area of shapes to determine which shapes have an equal, lesser, or greater area.

They must be able to justify their thinking (how do they know that is the area).

Use this blank grid to draw a shape that has an area of 17 square units.
