# Science Fair Display Board Instructions
(These directions follow the Scientific Method)

- For almost every science fair project, you need to prepare a **display board** to communicate your work to others. The following headers SHOULD be included on your science board to follow the Scientific Method.

- **Organize your information like a newspaper** so that your audience can quickly follow the thread of your experiment by reading from top to bottom, then left to right. Include each step of your science fair project: Abstract, question, hypothesis, variables, background research, and so on.

- **Use a font size of at least 12 points** for the text on your display board, so that it is easy to read from a few feet away. It's OK to use slightly smaller fonts for captions on picture and tables.

- **The title should be big and easily read**. Choose one that accurately describes your work, but also grabs peoples' attention. The title can be attached to the manila folders at the top or side to create extra space - BE CREATIVE!

- **A picture speaks a thousand words!** Use photos or draw diagrams to present non-numerical data, to propose models that explain your results, or just to show your experimental setup. But, don't put text on top of photographs or images. It can be very difficult to read.

- This sample shows how difficult it can be to read text when you print it on top of an image. Don't do it!

- **Check the rules for your science fair.** Here is a list of items that the EES science fair requires:

  - ➢ Your name on the display board
  - ➢ Captions that include the source for every picture or image
  - ➢ Acknowledgements of people who helped you
  - ➢ Your laboratory notebook (if applicable)

Materials and Construction Techniques

The standard presentation boards are self-standing and work quite well. Display boards in black or white-colored "foam core" (a sandwich made up of two pieces of cardboard with plastic foam in the middle) or corrugated cardboard are readily available at most office supply stores (Staples, Office Depot, Office Max) for $6 to $12.
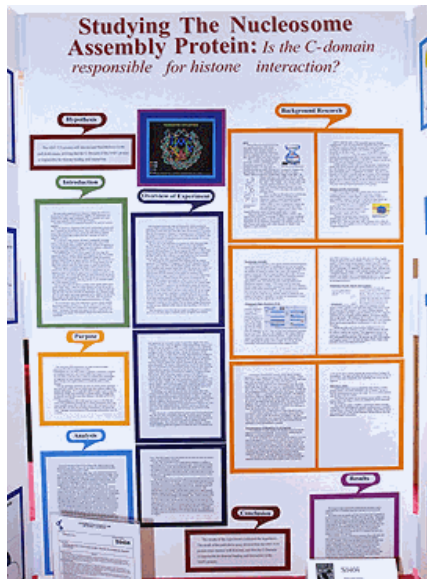

Print out or write your information on white paper that you will attach to your display board. Be sure to proofread each sheet before you attach it.

Glue sticks (use plenty) work well for attaching sheets of paper to your display board. Use double-sided tape for items like photographs that may not stick to glue.

Tip: Instead of regular paper, use cover stock (67#) or card stock (110#). These heavier papers will wrinkle less when you attach it to your display board, especially if you use a glue stick. Matte paper is preferable to glossy because it won't show as much glare— glare makes your display board difficult to read. (These are just suggestions and ARE NOT necessary).

Use color construction paper to add accents to your display board. A common technique is to put sheets of construction paper behind the white paper containing your text.

Science Fair Project Display Board Checklist

What Makes for a Good Science Fair Project Display Board?	For a Good Science Fair Project Display Board, You Should Answer "Yes" to Every Question

Does your display board include: Title
     Abstract
     Question
     Variables and hypothesis
     Background research
     Materials list
     Experimental procedure
     Data analysis and discussion including data chart(s) & graph(s)
     Conclusions (including ideas for future research)
     Acknowledgements
     Bibliography
	Yes / No

Are the sections on your display board organized like a newspaper so that they are easy to follow?	Yes / No
Is the text font large enough to be read easily (at least 12 points)?	Yes / No
Does the title catch people's attention, and is the title font large enough to be read from across the room?	Yes / No
Did you use pictures and diagrams to effectively convey information about your science fair project?	Yes / No
Have you constructed your display board as neatly as possible?	Yes / No
Did you proofread your display board?	Yes / No
Did you follow all of the rules pertaining to display boards for your particular science fair?	Yes / No
